## WORK PLAN FOR FUNCTION

\_\_\_\_line\_\_\_\_: \_\_\_\_number\_\_\_\_ returns \_\_\_\_number\_\_\_\_  
Function name      Parameter type      Function result type

### Description of function objective

Compute and return the y-coordinate of parameter x using formula  $y = x + 2$ .

### Sample parameter-result pairs

\_\_\_\_line\_\_\_\_: \_\_\_\_0\_\_\_\_ returns \_\_\_\_2\_\_\_\_  
Function name      parameter      Function result

\_\_\_\_line\_\_\_\_: \_\_\_\_3\_\_\_\_ returns \_\_\_\_5\_\_\_\_  
Function name      parameter      Function result

### Processing steps

#### 1. Compute result based upon parameter

Compute  $y = x + 2$

#### 2. Return result

Return y
