
WORK PLAN FOR FUNCTION

_____line_____ (_____number_____) returns _____number_____
Function name Parameter type Function result type

Description of function objective

Compute and return the y-coordinate of parameter x using formula $y = x + 2$.

Sample parameter-result pairs

_____line_____ (_____0_____) returns _____2_____
Function name parameter Function result

_____line_____ (_____3_____) returns _____5_____
Function name parameter Function result

Processing steps

1. Compute result based upon parameter

Compute $y = x + 2$

2. Return result

Return y
